

Introduction

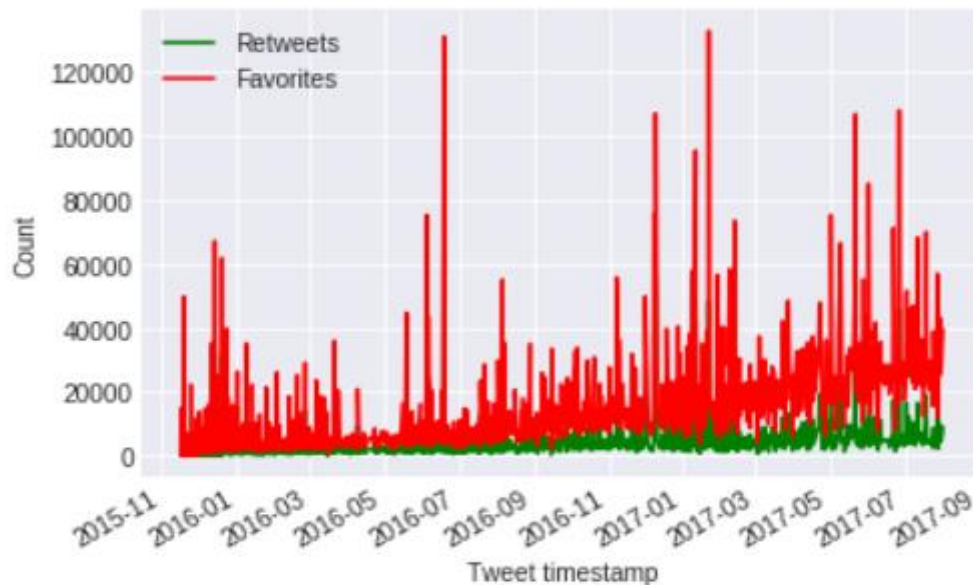

This analysis is for Tweets from the WeRateDogs Twitter account. My analysis revolved around the trend in popularity over time of the account, based on the number of Retweets and favorites, and analyzed ratings over time.

In this report I analyzed data from the WeRateDogs account on Twitter, in which I clarified what is the prevailing trend in popularity over time, as well as a rating over time.

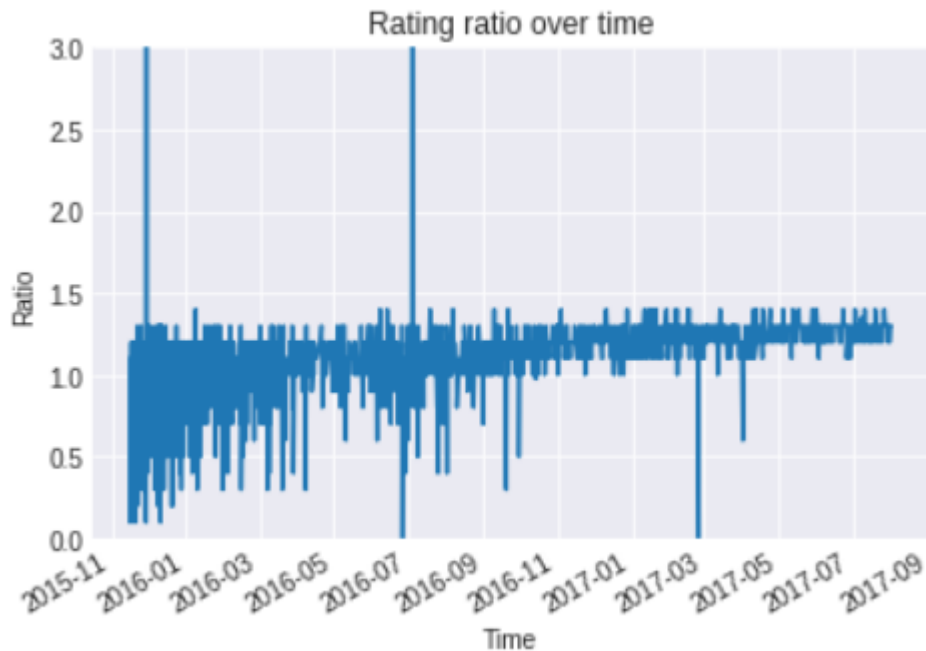

Analysis

There is a semi-direct relationship between favorites and Retweeting.

There is a noticeable increase in the number of preferences when compared to Tweets as well as several large outliers in favorites for popular Tweets.

Mostly, the rate are no more than 10, sometimes some even put other numbers, so I showed the largest percentage in this chart.

Many Tweets have been retweeted more than 1,000, or more than 50,000 times. Regardless of the rating.

There is no clear relationship between the rating and the Retweet.
